

Adapter SC, OM2, DUPLEX

The DATAWAY SC OM2 optical adapter is used for precise and reliable connection of four SC optical connectors in multimode (MM) networks. It is designed for OM2 type fibers (50/125 μm) and is mainly used in data centers, server rooms and LAN networks with higher transmission speeds.

The adapter is suitable for installation in optical patch panels, distribution boards and sockets. The duplex design allows the connection of one optical fiber with low attenuation and high centering accuracy.

Main features:

- Type: optical adapter (coupler)
- Connectors: SC - SC
- Design: duplex
- Fiber type: multimode OM2 (50/125 μm)
- Low attenuation and stable optical parameters
- Precise centering of ferrules
- Suitable for LAN, data centers, server rooms, optical distribution boards
- Color: gray (OM2)
- High-quality and durable processing
